		Network Operation Center Support	Network Operation Center Support
		Choice of Two Sensors from Temperature, Motion, Light and Radiation	Includes Four Sensors: Temperature, Motion, Light and Radiation
			Manifest Storage and Data Transfer Ability

The best protection you never saw™

Because thieves can't see InnerLoc, they can't pry, pick, saw, cut, shoot or tamper with it. But it's more than a tamper-proof locking system. Built-in sensors and tracking devices can alert you to thefts in real time and lead authorities to cargo before it has been fenced. Choose the model and features that fit your needs. And if your needs change, upgrading is easy. Most upgrades can be handled through signals sent to your unit via satellite.

InnerLoc fits inside the truck where thieves, vandals and terrorists cannot reach it. They move on to easier targets.
